Investment Objective & Strategy

Standard Insurance Company's Portfolio Fund is an interest-bearing account with the goal of conservation of principal. The Standard invests your deposits as part of its general assets. Your return is determined by the declared interest rate, not by the investment performance of The Standard's general assets. Assets in the Fund are available for employee transfer to other investments or to pay benefits to plan participants. Your account, when redeemed under normal circumstances at termination of service or retirement, will return your original investment plus interest. Other distributions (for example, if the plan or contract terminates) may result in charges that reduce your account balance. At the end of each year, the interest crediting rate for the following year will be announced. This rate applies to all funds on deposit. Interest is accrued daily and compounded quarterly.

Category Description: Stable Value

Stable value funds seek to provide income while preventing price fluctuations. The most common stable value funds invest in a diversified portfolio of bonds and enter into wrapper agreements with financial companies to guarantee against fluctuations in their share prices. The safety of these funds therefore depends on both the fund's investments as well as the financial strength of the insurance companies and banks that back the wrapper agreements.
